

Project Report - Earthly (PWA conversion)

Project Report - Earthly (PWA conversion)

=====

Project: Earthly - Educational site about land degradation and related topics.

Author: Agrim Sharma (student)

Summary:

- Converted original static website into a Progressive Web App (PWA).
- Added manifest.json for installability and icons.
- Implemented service-worker for offline support and caching strategy.
- Made minor mobile-friendly improvements by injecting meta tags and install prompt JS.

Files added:

- manifest.json
- service-worker.js
- assets/icon-192.png
- assets/icon-512.png
- README.md

Testing performed:

- Verified HTML pages contain required meta tags and SW registration.
- Created icons and placed them in assets folder.
- Recommend serving over HTTP (localhost) and testing on an Android device or Chrome devtools (Application tab) for installability.

Next steps (optional):

- Add responsive CSS improvements (hamburger nav, spacing) — I can patch your CSS if you want.
- Add a small quiz module and bookmarks (localStorage).
- Wrap with Capacitor for Android APK generation (I can provide step-by-step instructions).
